---

Here's what I mentioned in my voice mail. Is this just one of the semi-annual rumors of the Temperature TMDL starting up again or do you think it will actually happen in 2010? Thanks!

Andrew Kolosseus

from the draft Implementation plan for next two years of BiOp that will be discussed at RIOG tomorrow:

Expand water temperature modeling  
capabilities to include the Columbia River  
from Grande Coulee to Bonneville dams to  
better assess the effect of operations or flow  
depletions on summer temperatures

.

20102012

The Action Agencies will coordinate development of temperature  
models for the Columbia River with ongoing U.S. Environmental  
Protection Agency (EPA) total maximum daily load (TMDL)  
efforts

Scoping for this effort, development of an implementation plan,

and active pursuit of funding for this action will begin in 2010.
